GREER STOP NUT™

ABOUT US

Go with Green™

For more than 50 years **GREER STOP NUT™** has been recognized as a major supplier of internally threaded fasteners. GREER Locknuts offer quality and reliability for common applications in the transportation, communications, electronics, defense, and other industries.

Operating out of a 90,000 square foot facility in Nashville, Tennessee, the **GREER STOP NUT™ Locknut** product portfolio consists of nylon insert hex, clinch, and spline nuts, plus a variety of all-metal nuts in standard and made-to-order configurations.

GREER STOP NUT™ Locknuts meet MS, MIL, AN, and NAS specifications and are available in a variety of finishes, platings, and materials. The nylon insert material resists most organic acids, oils, greases, and common solvents and mineral acids. The toughness and resiliency of the nylon insert withstand the highly abrasive action caused by nicked threads in mating fasteners, thereby increasing reliability and reducing downtime from failed installations.

How They Work . . .

The molded green nylon insert is the locking element in GREER Locknuts. The internal diameter of the insert is a computer-determined degree smaller than the bolt thread and the external diameter is large enough to fit tightly under a rolled over crimped metal collar.

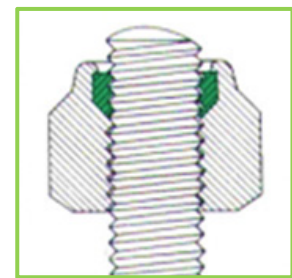

The resiliency of GREER's nylon collar prevents the thread of the bolt from cutting the collar. The bolt threads become impressed into the nylon forming a tight grip and preventing the nut from rotating free, even under severe shock and vibration.

Note: The driving torque creates a degree of metal-to-metal thread engagement along the upper flanks of the threads as the bolt is started into the nut. No matter how severe the vibration, the nylon collar exerts constant pressure against the threads on the bolt . . . not only where the bolt is engaged with the nylon, but also along the entire metal-to-metal thread engagement.

As the bolt enters the nylon, the downward pressure is created. The pressure forces the nut axially downward until the thread flanks of the nut and bolt are in close frictional contact. Thus locking occurs along the entire length of the threads.

NYLON INSERT LOCKNUTS

How They Look . . .

How They're Made . . .

GREER's green nylon insert collar is completely unaffected by most organic acids, oils, greases, and common solvents and mineral acids. In service, GREER's nylon insert is subjected to the highly abrasive action of mating fasteners with nicked threads, together with the normal application of high impact loads.

Green Nylon Insert Locknuts are available in a variety of finishes, platings, and materials to meet the demands of the most rigid applications. All GREER nylon insert locknuts meet MS, MIL, AN, and NAS specs. For complete information call your local GREER locknut distributor or call GREER direct at **615-832-8375**.

GREERSTOP NUT™

GREER PART NUMBERING CODES*

*Customizable to meet your requirements

625 F 5 2 NE -720

NUT TYPE

The letter "N" in the following combinations specifies a nylon Green locking insert

PLATING & FINISHES

- 0 Silver
- 1 Zinc Plated per ASTM B633
- 2 Cadmium Plated Per AMS-QQ-P-416, Method specifies Type & Class
- 3 Phosphate & Oil
- 6 Misc
- 7 Bright Nickel Plated Per QQ-N-290 Method specifies Type & Class
- 8 Anodized per MIL-A-8625
- 9 No Finish

MATERIAL (STANDARDS)

- 0 405 Monel
- 1 Alloy Steel
- 2 Low Grade Carbon Steel
- 3 A286
- 4 Medium Grade Carbon Steel
- 5 High Grade Carbon Steel (HT)
- 6 Aluminum
- 7 Stainless Steel AISI 303 or Equivalent
- 8 316 Stainless Steel
- 9 Brass – Commercial Half Hard

ADDITIONAL FINISH TREATMENTS

- "B" Black Oxide
- "C" Supplementary Clear Chromate Post-Treatment (Non-RoHS) (Steel Nuts Only) or Clear Anodize (Aluminum Nuts Only) or Clear Anodize
- "F" Supplementary Yellow Chromate Post-Treatment (Steel Nuts Only)
- "G" Supplementary Olive Drab Chromate Post-Treatment
- "L" Passivated and Lubricated (Stainless Steel Nuts Only)
- "Y" Supplementary Chromate Post-Treatment
- 1R RoHS Yellow Zinc Chromate (120hrs min salt spray)
- 2R RoHS Clear Zinc Chromate (120hrs min salt spray)

MATERIAL MODIFIER

(i.e. 625 = 625 Nickel Alloy)

- 1660 Thinner & Shorter Thank NM (BAC)
- 7582 Grade 8 NE 1 Notch (MS17829)
- 7900 Grade 8 NE 2 Notches (M45913)
- C Counterbore
- D 100% NDT
- DL Dry Film Lube (use after thd size)
- EXE All Metal Elliptical
- H Crossdrill hole
- J Specifies High Strength Aluminum
- K Kap
- L Lube-place at end of P/N
- L1 Level 1 (SON-Lot # Stamped)
- LH Left Hand Threads
- MXE All Metal Flexlock
- NC Clinch Nut
- NCFMA Miniature Clinch Nut Flush Mounting
- ND Spline Nut
- NE Light Hex, Fractional Thread Sizes
- NE5 Cold Formed Grade 5
- NE8 Cold Formed Grade 8
- NEC Light Hex, Fractional thread Sizes, Collated
- NH No Holes
- NEN IMPORT
- NM Hex, Machine Screw Thread Sizes
- NMC Hex, Machine Screw Thread Sizes Castellated
- NN S.A.E Regular Hex
- NTE Light Hex, Thin, Fractional Thread Sizes Castellated
- NTEC Light Hex, Thin Fractional Thread Sizes Castellated
- NTM Hex, Thin, Machine Screw Thread Sizes
- NTMC Hex, Thin, Machine Screw Thread Sizes Castellated
- NTU Heavy Hex, Thin
- NU Heavy Hex
- PCT Conelock nut
- R Regular (industry Stnds – i.e. R509 = NAS509; R423 – NAS1423)
- SC Slotted Castellated (COLLAR)
- SL Spiralock
- SR Slotted Regular (NO COLLAR)
- U Size between Hex-Heavy Hex; Place U at end of Thread
- V Vespel Lock Feature
